

All on 4

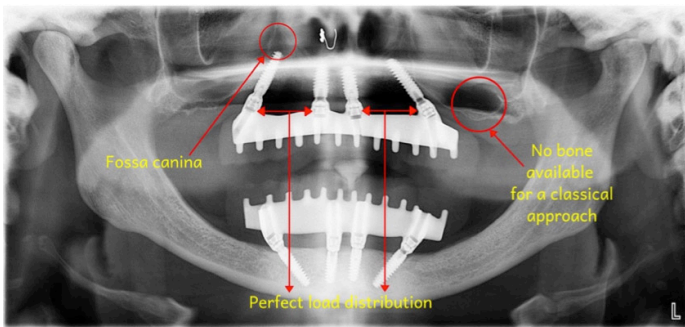

The protocol All on four (All on 4) offers the possibility to replace all your teeth in one day.

Using only 4 implants, inserted in a specifically strategic way, your doctor can provide you with a full arch bridge on the same day.

Using distally 2 tilted implants, in combination with 2 parallel implants in the center, the construction is mechanically optimized to receive strong biting forces. Even in patients with little bone available, this technique offers a great solution.

Patients with shallow bone below the sinus, great bone loss due to gum disease or aging, can perfectly well be treated with this protocol.

No bone transplant or sinus lift needed.

The tilted implants are anchored into solid strong basal bone, always present at the fossa canina.

This is where normally the roots of the canines are located.

A full arch acrylic bridge is delivered the same day.

These teeth are made individually and will match in color and shape to the characteristic of your face.

For who?

Everybody using removable dentures, or those patients with loose, decayed and missing teeth, the all on four protocol offers a solution to gain back a self-confident smile in just one day.

Even if you have inquired about dental implants, but were told that you do not have sufficient bone left, this specific All on 4 technique works well without any bone transplant or sinus lift. We can anchor 4 implants and deliver a new fixed full bridge on the same day.

Safe?

The All on 4 protocol was developed more than a decade ago. Over the years our experience has grown and today we can state that the technique offers a totally safe and predictable protocol. Success percentage rates are the highest amongst all dental implant procedures.

Painful?

Strong local anesthesia in combination with sedative medication make that the surgery is not painful.

Patients report some discomfort during the following days.

Antibiotics, anti-inflammatory and pain control drugs are prescribed.

PRICES:

7.700 € (including protocol AO4 + first set of same-day-teeth)

3.300 € (including definitive teeth to be fixed after at least 6 months of osseointegration)

May I express my sincere gratitude to Dr Piessens and his team. I travelled from Britain to have the All on

4 procedure a few weeks ago. It truly was pain free, I viewed the surgery prior online I had some concerns and there was no need at all, I had no pain during the procedure and barely any discomfort afterwards. I can highly recommend this fantastic clinic for any fellow Brit thinking of doing the same. I only wish I had done it years earlier. Best wishes to all. Truly life changing.

P. Arnold

With an all-on-four procedure in mind finding the right dentist can be a daunting process. Finding one in another country becomes an added issue and worry. Thus, after much research and study we, my wife and I, decided upon Dr. Cris Piessens. All the reviews helped as well. We could not have chosen better. In a word the total experience has been outstanding.

From the initial contact with his office, the initial consult, procedure and follow up the experience has been beyond our expectations especially mine. The staff is friendly, professional and competent with language never being an issue as most are multi-lingual. Clinical standards are of the highest quality. Any anxieties I had were quelled as Dr. Piessens explained how the procedure would be done to me and what to expect the day of the procedure. This consult was after x-rays and a CT scan were taken. All concerns are fully discussed putting ones mind at ease.

I have been extremely pleased with the outcome and care given throughout that a simple thank you seems inadequate--but there it is--

Thank You and we look forward to our visit next year.
